

The Dustbane Way

Cleaning a Receiving Dock

Cleaning a receiving dock starts with a simple program. Ask us about a custom program that will meet your individual needs. Here's our baseline recommendation.

1

Cleaner & Degreaser: Complex Orange

Receiving docks are a busy place where dirt, grease and grime can quickly accumulate on floors and equipment. This causes slippery surfaces and could lead to a workplace injury. Complex Orange is a solvent free cleaner degreaser that quickly emulsifies and removes the toughest dirt and soils.

- Dilute in cold water at a rate of 1:30.
- Available in 4L, 20L & 210L.

3

Ice Melt Remover: Film Away

Ice melts are commonly used around receiving docks and tend to get dragged into the receiving area. If left unattended, ice melt residue can damage the concrete floor. Using Film Away can efficiently get rid of the residue while neutralizing the floor. UL ECOLOGO Certified.

- Available in 4 L.

2

Floor Sealer: Foundation

Foundation stops concrete dusting, improves stain resistance, increases abrasion and crush resistance, and makes the surface less susceptible to damage from heavy traffic. Foundation achieves uncommon levels of durability and permanency for total sealer protection. APE and odour free. UL ECOLOGO Certified.

- Two to three coats recommended.
- Available in 4 L & 20 L.

4

Debris Pickup

Cleaning debris that have accumulated on receiving dock floors with a broom takes a long time and just stirs the dust up into the air. To get the job done quickly and efficiently, this process requires a good performing, high capacity wet & dry canister vacuum such as the PC-3, PC-3 on drum or XL 18 Tip & Pour with front mount squeegee.
