Spray-Buff & Dry Bright Products

Spray buffing is an important element of any floor maintenance program. Spray buffing is an excellent way to maintain gloss and durability between periodic restoration of a finished floor. Not only will it extend the life of your floor finish but this time saving step revives the "wet gloss" look of your floors quickly – making your floors look their best at all times. Always complete proper dust mopping and damp mopping before spray buffing to avoid dirt being buffed into the floor finish.

Dry bright floor finishes are ultra durable, due to their high solid content and provide a high-gloss finish that is ideal for low maintenance programs. Formulated for easy application, these finishes leave a bright gloss right off the mop.

- Revives the gloss
- Protects from stains, scuffs, and scratches
- Labour saving and detergent resistant
- Protects both resilient and non-resilient floors
